

Keep Learning  
Keep Building

## TECHNICAL SKILLS

### Programming

JavaScript, Python, OOP Concepts, JSON

### Frontend

React.js, Next.js, HTML5, CSS3, JavaScript

### Backend & APIs

Node.js, Express.js, REST APIs, JWT Authentication

### Databases

MongoDB, MySQL, Relational & Non-Relational Database Concepts

### Software Development

CRUD, REST Architecture, MVC Concepts, SDLC, System Analysis, Debugging, API Integration

### Automation

Python Automation, Data Processing, Workflow Automation, Web Automation

### Tools

Git, GitHub, Postman, VS Code, Replit, Vercel, Render

### Currently Learning

Angular, AJAX, N-Tier Architecture

## EDUCATION

**Bachelor's Degree in Information & Communication Technology**

University of Gondar

## LANGUAGES

**Amharic** — Native

**English** — Professional working proficiency

## PROFESSIONAL SUMMARY

Junior Software Developer with hands-on experience in system analysis, internal web applications, Python automation, REST APIs, databases, and workflow automation. At Yosol PLC, I have worked on identifying business problems and building practical technical solutions, including an order issue management system, rental management system, invoice processing automation, Shopify SEO automation, and other repetitive-work automation. Alongside my professional work, I continuously study and build full-stack applications using JavaScript, React.js, Next.js, Node.js, Express.js, MongoDB, and MySQL. Strong interest in problem solving, software development, automation, and learning new technologies.

## PROFESSIONAL EXPERIENCE

**Yosol PLC — Addis Ababa, Ethiopia**

**March 2022 – Present**

### Systems & Automation

- Analyzed business processes and identified opportunities to improve manual workflows using software and automation.
- Helped develop an **Order Issue Management System** for recording, organizing, and managing order-related issues.
- Helped develop a **Rental Management System** for managing rental-related information and workflows.
- Used Replit and AI-assisted development tools to prototype and build internal web-based solutions.
- Developed Python automation for repetitive business tasks.
- Developed an **invoice parsing and processing automation** to extract and process invoice information and reduce repetitive manual work.
- Automated repetitive Shopify SEO tasks to improve workflow efficiency.
- Worked with structured data, APIs, JSON, spreadsheets, and business information.
- Tested and debugged internal tools and automation workflows.
- Documented processes and improved solutions based on business requirements.

## SELECTED PROJECTS

### Invoice Processing Automation

Developed a Python-based workflow to automate repetitive invoice-processing tasks. The system processes invoice information, cleans and organizes data, and prepares data for downstream business workflows.

Python, Automation, Data Processing, Excel

### Order Issue Management System

Developed an internal web-based system to organize and manage order-related issues. Worked on requirements, workflow design, implementation, testing, and improvement.

Web Development, Database, CRUD

### Rental Management System

Developed a web-based solution for managing rental information and business workflows.

Web Development, CRUD, Database

### YouTube Video Automation

Developed an automated workflow to find engaging parts of long YouTube videos, create short-form clips, crop/format them, and add captions automatically.

Python, Automation, Video Processing

### Task Management System

Built a full-stack task management application with authentication, CRUD operations, filtering, and responsive frontend features.

React.js, Node.js, MongoDB, JWT

### Ruth Store

Built a responsive web application for managing and displaying store products and information.

React.js, JavaScript, REST API, JSON

### Personal Portfolio

Built and deployed a responsive portfolio website showcasing my projects and skills. <https://haileyesus-portfolio-cvys.vercel.app/>

React.js, HTML5, CSS3, Vercel
